

## Project Partner 13

### Office of the Tyrolean Regional Government Regional Forestry Commission (public)

Amt der Tiroler Landesregierung  
Gruppe Forst  
Bürgerstr. 36  
6020 Innsbruck  
[www.tirol.gv.at/wald](http://www.tirol.gv.at/wald)

#### main focus of institution and department

Legal execution of forest law, government aid for forest management with special focus on protection forests, advisory services for forest owners

#### short description of PP activities

Emergency management plan for natural disasters in forests; Development of a GIS-based tool to specify natural disasters as a topographic base for all measurements associated with reconstruction and recovery activities. The GIS database should be used by 250 local foresters, who are members of the Tyrolean Forest Service

#### short description of test area

Tyrol, Austrian province, forested area: 515.000 ha

#### what does the partner bring into the project?

The Tyrolean Forestry commission is well organized with local foresters in every Tyrolean community and has a lot of practice with modern WEB-GIS based databases. We also have a lot experience in the prevention of natural disasters by our activities in managing protection forests an monitoring torrents in cooperation with the Avalanche and Torrent Control Service.

#### benefits for the partner by participation in the project

Natural disasters in forests such as windthrow, avalanches, forest fires and landslides are a challenge for the Tyrolean Forestry Commission, because 2/3 of the forests in Tyrol are protection forests. The project will help us to coordinate all measures of recovery much more efficiently than before
